Abstracts

Manual laser bird deterrents are handheld or tripod-mounted devices that project a moving laser beam to create an optical disturbance in a bird's field of vision, leveraging birds' instinctive aversion to perceived threats to encourage them to leave an area without causing physical harm. These devices are used in agricultural settings, warehouses, airports, and urban environments to protect crops, property, and infrastructure from bird-related damage, offering a non-lethal, chemical-free alternative to traditional bird control methods such as nets, spikes, or auditory repellents.

The global Manual Laser Bird Deterrents market size was estimated at USD 15.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
