Abstracts

A manual nasal wash is a tool used to clean the nasal cavity. It usually uses airbag pressure or the water's own gravity when the bottle is inverted to deliver saline into the nostrils. The saline flows through the nasal vestibule, sinuses, and nasal passages, bypasses the nasopharynx, or is discharged from one nostril or from the mouth, in order to discharge pathogens, allergens, secretions, and purulent nasal mucus accumulated in the nasal cavity, thereby restoring the nasal cavity to a normal physiological environment and restoring the nasal cavity's self-detoxification function.
