### Report Overview

Manual powder coating systems are equipment used for the application of dry powder coatings onto various surfaces. These systems typically consist of a powder coating gun, an air compressor, and a control unit that regulates the flow of powder and air pressure. The operator loads the powder into the gun, adjusts the settings based on the specific coating being applied, and then sprays the powder onto the surface to be coated. The powder particles adhere to the surface electrostatically and form a uniform coating when heated in a curing oven. Manual powder coating systems are commonly used for small to medium-sized production runs and allow for precise control over the coating process.
