Report Overview

A manual water sampler is a tool used to collect water samples from various sources such as lakes, rivers, streams, and oceans for analysis in laboratories or for various research purposes. It typically consists of a long tube with a mechanism to seal off the bottom end once the desired water depth is reached. This prevents contamination of the sample from surface waters during retrieval. The sampler may also have features for measuring parameters like water temperature, pH, and conductivity at the time of sampling to provide additional data alongside the collected sample.
