Abstracts

Maotai-flavored Baijiu lees refer to the residual byproducts (called "lees") produced during the brewing process of Maotai-flavored Baijiu, a specific type of Chinese liquor characterized by its strong, savory, and aromatic profile. The lees consist primarily of fermented grains such as sorghum, rice, and wheat, and contain various organic compounds, enzymes, and nutrients. These lees are often considered a waste product, but they also possess valuable components that can be utilized for various applications, including animal feed, bioenergy production, and resource recovery.

Strong Demand for Maotai Baijiu:The growing global demand for Maotai-flavored Baijiu, especially in the premium alcoholic beverage market, contributes to a consistent and increasing production of Maotai-flavored Baijiu lees. As one of China's most iconic liquor brands, Maotai continues to grow its market share, driving the supply of its lees as byproducts.

Government Support for Waste Utilization:China's policies promoting sustainability and circular economy initiatives are encouraging the utilization of Baijiu lees. The government's push for reducing waste in the brewing industry has made the resource utilization of Baijiu lees a priority, increasing demand for innovations in this space.

Animal Feed:Maotai-flavored Baijiu lees are rich in nutrients, such as proteins, amino acids, and carbohydrates, making them suitable for animal feed applications. By processing these lees into high-quality feed, there is potential to reduce the cost of livestock feed and promote sustainable agricultural practices.

Bioenergy Production:The rich organic content in Maotai-flavored Baijiu lees also makes them a good candidate for bioethanol production, helping to reduce reliance on traditional energy sources and supporting renewable energy projects.

The global Maotai-Flavored Baijiu Lees market size was estimated at USD 51.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
