## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Marble Calibrating Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of marble calibrating machines will reach approximately 5,800 units, with an average price of approximately US\$22,000 per unit and an industry average gross profit margin of approximately 28%. Marble calibrating machines are high-precision equipment specifically used in stone processing. They primarily use diamond or resin grinding heads to calibrate and grind slabs such as marble, granite, and artificial stone, achieving uniform thickness and a smooth surface. This provides a stable substrate for subsequent polishing, cutting, and assembly. This type of equipment typically features multiple grinding heads, high automation, and digital control, significantly improving the consistency and production efficiency of stone products. Market demand is driven by the expansion of stone applications in architectural decoration, countertops, and public facilities. Furthermore, the trend towards green, energy-saving, and low-waste stone production is accelerating upgrades. Upstream production involves raw materials such as diamond abrasives, servo drive motors, CNC systems, and steel frames; downstream production involves stone processing plants, architectural decoration projects, and artificial stone manufacturers. LONGINOTTI GROUP's production capacity is approximately 220 units per year, mainly targeting the high-end markets in Europe and the Middle East. In a typical application scenario, large stone mills typically deploy six to seven units. Multi-head models (two to six heads) process 15 to 40 square meters per hour, while single-head models process 5 to 10 square meters per hour. Water consumption per unit can reach up to 30 cubic meters per hour. High-end artificial stone production lines typically employ five or more units to ensure continuous and stable production.

The global Marble Calibrating Machine market size was estimated at USD 83.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
