Abstracts

Marine aluminum gangways are specialized, lightweight, and corrosion-resistant boarding structures used primarily in the maritime and offshore industries to provide safe and stable access between vessels, docks, offshore platforms, and other marine installations. These gangways are typically constructed from high-grade aluminum alloys, such as 5083 or 6061, which offer an optimal balance of strength, durability, and resistance to harsh marine environments, including saltwater exposure. Designed with features such as non-slip surfaces, handrails, adjustable lengths, and sometimes telescopic or folding mechanisms, they ensure compliance with international safety standards while facilitating ease of deployment, storage, and maintenance. Their applications span commercial shipping, passenger ferries, yacht clubs, naval operations, and oil and gas sectors, where reliable, efficient, and secure transfer of personnel and light equipment is essential.

The global Marine Aluminum Gangway market size was estimated at USD 85.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
