Abstracts

A Marine Assembled Crankshaft is a type of crankshaft constructed by assembling multiple components, such as crank throws, main journals, and counterweights, instead of being forged or cast as a single piece. This design is commonly used in large marine diesel engines, particularly slow-speed two-stroke engines, where the crankshaft size and weight make integral forging impractical.

The global Marine Assembled Crankshaft market size was estimated at USD 491.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
