Report Overview

Shipboard power is generated using a prime mover and an alternator working together. For this an alternating current generator is used on board. The generator works on the principle that when a magnetic field around a conductor varies, a current is induced in the conductor. The Power Distributed on board a ship needs to be supplied efficiently throughout the ship. For this the power distribution system of the ship is used. The electrical onboard ships can be divided into several specific systems: Power Conversion Equipment, Onboard Power Distribution, Electrical Propulsion System, Complete Onboard Electrical Systems. All the electrical equipment onboard ships are similar to land however, they are upgraded to withstand the rigorous atmosphere of the sea and moving ship to withstand humid surroundings, high temperatures, salty and corrosive atmosphere, vibration, etc.
