Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Marine Fire Doors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Marine fire doors are steel doors designed and manufactured specifically for offshore environments such as ships and offshore platforms, meeting fire protection and sealing requirements. In 2024, the global sales volume of marine fire doors was 232,000 units, with an average price of approximately USD 3,000?5,000 per door and a gross profit margin of 15?25%. Common parameters for marine fire doors include: fire rating (such as IMO A-60, B-15, B-30, etc.), door frame material (galvanized steel, stainless steel), door leaf thickness (e.g., 40?65 mm), heat and smoke insulation materials (asbestos, rock wool, or inorganic non-combustible insulation layer), certification standards (IMO 754(18) / FTP 2010, SOLAS), opening method (hinges, sliding, folding), acoustic performance (noise reduction capability up to 28?44 dB), and sealing/air tightness. In the production of the above products, the upstream mainly relies on steel plate materials, fireproof and heat-insulating materials (such as ceramic fiber or inorganic cotton), sealing strips, and hinge hardware; the downstream connects shipyards, offshore platform builders, and the maintenance and renovation market. Momec For example, the company, located in Bottnaryd, Sweden, specializes in manufacturing A- and B-class steel ship doors, including A-60 and B-15/B-30 fire-resistant doors. All products meet SOLAS/IMO 754(18)/FTP 2010 standards and are manufactured at the Bottnaryd factory. Momec has announced a strategic expansion of its production lines through its parent company, Weland, to significantly enhance its international competitiveness. The marine fire door market is experiencing stable growth, driven by increasingly stringent global maritime safety regulations (such as SOLAS and IMO FSS Code) and the dual demands of ship and offshore platform maintenance and

retrofitting. With the increase in retrofitting projects and the growing importance of human safety and asset protection, shipyards and shipowners are continuously expanding their demand for high-performance fire doors (especially high-grade A-60, automatic/sliding doors, and doors with intelligent monitoring functions). Simultaneously, new shipbuilding projects (such as cruise ships, container ships, and LNG carriers) and offshore engineering projects (offshore wind power platforms, FPSOs, etc.) are increasing their demand for fire doors with lightweight insulation, low smoke emissions, and energy-efficient structures. On the other hand, fluctuations in raw material (steel, insulation materials) prices, compliance costs with classification societies and certification standards, and manufacturers' capacity expansion capabilities pose potential challenges.

The global Marine Fire Doors market size was estimated at USD 1048.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
