Abstracts

Marine fireproof boards are specialized construction materials designed specifically for use in marine environments, where stringent fire safety regulations are enforced to protect vessels, offshore platforms, and port infrastructure. These boards are engineered to resist ignition, inhibit flame spread, and maintain structural integrity under high temperatures, often meeting international standards such as those set by the International Maritime Organization (IMO) and classification societies like DNV and ABS. Typically composed of non-combustible materials such as mineral wool, calcium silicate, ceramic fibers, or vermiculite-based composites, they are used in applications including bulkheads, ceilings, duct enclosures, and fire-rated divisions to compartmentalize and delay the progression of fire, thereby enhancing evacuation time and overall safety at sea.

The global Marine Fireproof Board market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
