Abstracts

Marine fuel oil chemicals, also known as bunker fuel additives or fuel treatment chemicals, are specialized formulations designed to enhance the performance, efficiency, and environmental compliance of marine fuels used in large vessels such as container ships, tankers, and bulk carriers. These chemicals address challenges related to fuel stability, combustion quality, emissions control, and machinery maintenance, with common categories including combustion improvers, stabilizers, dispersants, corrosion inhibitors, and cold flow improvers. Their application is critical for optimizing engine operation, reducing harmful pollutants like sulfur oxides (SOx) and nitrogen oxides (NOx) in alignment with International Maritime Organization (IMO) regulations, mitigating issues such as sludge formation and microbial growth, and extending the lifespan of fuel systems and engines. The effectiveness and composition of these additives are tailored to the specific properties of residual fuels (e.g., heavy fuel oil) and distillates (e.g., marine gas oil), reflecting the complex nature of modern bunker fuels and evolving regulatory demands.

The global Marine Fuel Oil Chemicals market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
