### Report Overview

Marine-grade plywood is a type of plywood specifically designed and manufactured for use in marine applications and environments. It is engineered to withstand exposure to moisture, water, and humidity without degrading or losing its structural integrity. Marine-grade plywood typically uses a waterproof adhesive in its construction, such as phenolic or melamine, which makes it highly resistant to delamination and rotting. Additionally, the wood veneers used in marine-grade plywood are often of higher quality and selected for their strength and durability.
