## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Marine Growth Prevention System (MGPS) for Ships competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Marine Growth Prevention Systems (MGPS) for ships reached 18,500 units, with an average price of 12,000 USD per unit, a production capacity of 22,000 units, and a gross margin of 32%. Marine Growth Prevention Systems (MGPS) are specialized anti-fouling devices installed in a ship's sea chest, seawater cooling pipelines and related compartments. By using copper-ion electrolytic systems, biocide dosing or hybrid anti-fouling technologies, MGPS prevents the attachment of barnacles, mussels, algae and other marine organisms, ensuring long-term flow efficiency of seawater cooling circuits, improving operational performance and reducing maintenance costs. Upstream of MGPS includes copper anodes, electrolytic electrodes, biocide chemicals (typically sodium hypochlorite or other oxidizing agents), corrosion-resistant housings, controllers, power modules and seawater pipeline fittings. Supply is mature, with copper and electrode materials forming a major cost share; chemicals are sourced from specialized chemical suppliers. Midstream manufacturers design, assemble and test MGPS units, including electrolysis chambers, anodes, control cabinets, monitoring modules and installation accessories. Their competitiveness relies on electrolysis stability, anti-fouling effectiveness and long-term reliability in harsh seawater conditions. Downstream demand comes from shipbuilding and ship maintenance markets, including merchant vessels, tankers, container ships, LNG carriers, offshore vessels and naval ships. Purchases are made by shipyards, shipping companies and repair yards, with demand strongly influenced by newbuilding activity and fleet maintenance cycles.

The global Marine Growth Prevention System (MGPS) for Ships market size was estimated at USD 222.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
