Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Marine Growth Prevention Systems (MGPS) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Marine Growth Prevention Systems reached 42,600 units, with an average price of 18,500 USD per unit, a total production capacity of 50,000 units, and a gross margin of 28%. Marine Growth Prevention Systems are anti-fouling solutions used in ships, offshore platforms, cooling water systems, and coastal industrial installations. These systems utilize technologies such as electrolytic chlorination, copper anode dosing, electrolysis, ultrasonic treatment, or controlled chemical injection to inhibit the growth of marine organisms including microorganisms, barnacles, mussels, and algae. MGPS prevents blockages, heat-exchange inefficiencies, and corrosion caused by marine fouling, ensuring stable long-term operation of propulsion systems, cooling circuits, and industrial marine infrastructure. The global MGPS market continues to grow steadily, driven by new shipbuilding activity, offshore equipment investment, and the expansion of coastal industrial cooling-water infrastructure. As modern vessels adopt higher-power engines and more complex cooling circuits, the need for reliable anti-fouling systems becomes increasingly critical. Meanwhile, demand growth is strongest in Asia-Pacific shipyards and Middle Eastern seawater-cooled power plants. Multiple technology routes coexist, with copper-anode and electrochlorination systems remaining dominant, while low-maintenance ultrasonic anti-fouling systems are gaining share in small and medium-sized vessels. The competitive landscape is led by specialized marine anti-fouling technology providers and offshore equipment suppliers, where companies differentiate through lifecycle costs, maintenance needs, environmental compliance, and system integration capability.

The global Marine Growth Prevention Systems (MGPS) market size was estimated at USD 788.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
