Report Overview:

A boat's steering system determines the boat's course when the steering wheel is turned and, like most Others systems on a boat, needs regular inspection, maintenance and cleaning during the boating season.

A boat's steering wheel is part of the helm that connects to a mechanical, electric, or hydraulic system to assist in turning the boat. Boats with outboard motors steer with a wheel which rotates the entire drive unit; inboards sometimes use a pod with an attached propeller; personal watercraft use jet drives with an impeller to force water into a nozzle that the operator can turn to the desired course. Some modern ships replace the wheel with a toggle that remotely controls an electric or hydraulic rudder drive, with an indicator that shows the rudder angle in real time to the helmsman.

The Global Marine Hydraulic Steering System Market Size was estimated at USD 234.56 million in 2023 and is projected to reach USD 290.01 million by 2029, exhibiting a CAGR of 3.60% during the forecast period.
