Report Overview

Marine low-speed diesel engines are large diesel engines that usually rotate at speeds between 80 and 300 revolutions per minute (RPM). Compared with medium-speed and high-speed diesel engines, low-speed diesel engines have lower speeds but extremely high power output and efficiency, making them suitable for driving propellers on large ships. This type of engine is usually a two-stroke design, which can complete the intake, compression, combustion and exhaust processes through two strokes in each working cycle.
