Abstracts

Ship maintenance service refers to a comprehensive service that uses systematic technical means to carry out preventive maintenance, fault repair and performance optimization of ship structures, power systems, electrical equipment, outfitting equipment and auxiliary systems, aiming to ensure that ships meet the requirements of safe navigation, regulatory compliance and operational efficiency throughout their life cycle. This service covers planned maintenance of ships (such as dock repair cycle management, regular equipment inspection), fault repair (such as main engine crankshaft crack repair, propeller bearing replacement) and technical upgrades (such as energy efficiency optimization transformation, digital monitoring system integration), and requires the formulation of standardized processes based on international conventions (such as SOLAS, MARPOL), classification society specifications (such as LR, DNV) and manufacturer manuals (OEM Guidelines). The service content involves hull structure inspection (such as ultrasonic thickness measurement, coating integrity assessment), mechanical system commissioning (such as diesel engine power calibration, gearbox alignment), electrical system diagnosis (such as insulation resistance testing, inverter parameter optimization) and automation control upgrades (such as PMS system integration, unmanned cabin monitoring), as well as special operations such as corrosion protection (such as cathodic protection system maintenance) and anti-pollution equipment calibration (such as oil-water separator emission detection). The market is primarily driven by the increasing demand for efficient and reliable maintenance services for ships and vessels. The growing focus of governments and private organizations on maritime safety and security is also propelling the growth of the market. Furthermore, the rising number of commercial and recreational vessels, coupled with the growing need for regular maintenance and repair, is driving the demand for marine maintenance services. However, the lack of skilled personnel and the high cost associated with marine maintenance services are key factors that may

hinder the growth of the market. In addition, the increase in environmental regulations and the growing concerns over marine pollution have led to the adoption of eco-friendly maintenance and repair techniques, which may also pose a challenge to the growth of the market.

The global Marine Maintenance Service market size was estimated at USD 956.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
