## Abstracts

The marine multi-spectrum optoelectronic system is a photoelectric device installed on ships that integrates multiple spectral detection technologies and photoelectric conversion technologies for multi-dimensional detection, analysis, and identification of the environment and targets surrounding the ship. It exploits the different reflection, radiation, or absorption characteristics of different substances under electromagnetic waves of various wavelengths. By utilizing multiple spectral channels, it decomposes incident broadband optical signals into several narrowband light beams and then detects and images these narrowband lights separately.

The global Marine Multi-spectrum Optoelectronic Systems market size was estimated at USD 8750.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
