Abstracts

A marine multibeam system is a sophisticated sonar technology used for high-resolution seabed mapping and underwater object detection, employing multiple simultaneous acoustic beams arranged in a fan-shaped array perpendicular to the vessel's direction of travel to generate detailed, wide-swath bathymetric data and backscatter imagery of the seafloor and water column. These systems are essential for applications including hydrographic surveying, offshore infrastructure inspection, pipeline and cable route planning, dredging operations, environmental monitoring, search and recovery missions, and scientific research, offering advantages over single-beam sonars through significantly increased coverage efficiency, higher data density, and the ability to create comprehensive three-dimensional models of underwater terrain with centimeter-level accuracy.

The global Marine Multibeam System market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
