Abstracts

Marine oil water separators are specialized equipment installed on ships and offshore platforms designed to remove oil, grease, and other hydrocarbons from bilge water and other oily wastewater streams before discharge overboard, ensuring compliance with stringent international maritime regulations such as those enforced by the International Maritime Organization (IMO) under MARPOL Annex I. These systems typically utilize a combination of physical separation methods?including gravity separation, coalescence, and filtration?to achieve effluent oil concentrations below the mandated threshold of 15 parts per million (ppm), thereby preventing marine pollution and minimizing environmental impact while enabling vessels to operate legally in global waters.

The global Marine Oil Water Separator market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
