Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Marine Quick Closure Valve (MQCV) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Marine Quick Closure Valve (MQCV) is a safety control valve used in ship piping systems. It is designed to rapidly shut off the flow of fuel, cooling water, ballast water, or other media in emergency situations (such as fire, leak, or collision) to prevent the spread of the accident and ensure the safety of the vessel and personnel. This valve is typically installed in critical locations such as engine rooms, fuel tanks, and hydraulic compartments, and is instantly closed via remote control systems (e.g., pull-wire, pneumatic, or electromagnetic). MQCVs offer high reliability, corrosion resistance, vibration resistance, and high-temperature resistance, and comply with international maritime safety regulations such as IMO, ABS, and DNV. The price of marine quick-closing valves varies depending on the actuation method and specifications, but the average price is approximately US\$1,500 per unit. Production volume is approximately 536,000 units. Major manufacturers such as K&HME and Marotta Controls have annual production capacity per line of 20,000-40,000 units and 15,000-30,000 units, respectively. The overall industry gross profit margin remains between 35% and 60%. The marine quick-closing valve (MQCV) market exhibits a mature upstream and downstream structure. The upstream sector includes suppliers of valve body casting materials such as copper-nickel, stainless steel, and aluminum-bronze, as well as manufacturers of actuator components such as cylinders and solenoid valves, and control systems such as ship PLCs and remote cables. The downstream sector encompasses shipbuilders of tankers, passenger ships, and LNG carriers, as well as maritime engineering companies and ship repair and modification service providers. Future development trends will focus on intelligent ship system integration (combining

IoT and remote control) and coordinated response with ship safety systems (e.g., fire, leak, and vibration). Furthermore, the market will support green ship and environmental regulations (such as IMO Tier III standards) and promote the widespread use of modular design and maintenance-free technologies to enhance safety, response efficiency, and ease of operation and maintenance.

The global Marine Quick Closure Valve (MQCV) market size was estimated at USD 804.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
