Abstracts

Marine Radio Detection And Ranging use radar detectors installed on ships for navigation avoidance, ship positioning, and narrow channel navigation. Wavelet electromagnetic waves are emitted when the echo is received, which helps to identify the range, angle or velocity of the target. Marine Radio Detection And Ranging offer advantages for maritime navigation and collision avoidance. It provides mariners with the necessary means of observation when visibility is poor, and even in adverse weather or climatic conditions, they can detect stationary and moving objects, which helps avoid accidents. In recent years, some governments and their defense agencies have been forced to increase border security and surveillance due to the increase in cross-border conflict and terrorist activities around the world. Modern radar systems that are more accurate, reliable, and work better are critical to border security and the surveillance tactics that different governments are using. Technological developments and rising demand for high-tech weapons, devices, and armaments are other key factors driving market expansion for the marine radar industry. The market is expected to witness significant growth over the forecast period on account of increasing demand for cutting-edge artillery systems. Demand for latest radar systems is being driven by developing countries in Asia-Pacific and Middle East such as India, China, Israel, and South Korea, which are enhancing their fleets with modern systems and capabilities. Defense organizations around the world have put a lot of emphasis on creating different programs to help different businesses create surveillance systems. Realizing that the government is looking for effective and cost-effective defense solutions, producers of military radar systems are paying particular attention to balancing quality and cost while installing retrofit solutions to upgrade existing solutions to the latest standards. Hence, increasing number of cross-border conflicts and terrorist activities drives the growth of the global marine radar market over the forecast period.

The global Marine Radio Detection And Ranging market size was estimated at USD 1591.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
