Abstracts

Marine seismic equipment & acquisition is the method used for collecting information about the subsea surface. In marine seismic operation, the geophysicists use the same principle used by earthquake seismologists, but relatively low acoustic energy (sound waves) is generated mechanically for collecting the data. The data thus collected provides accurate information about the rock formation and other vital data of the ocean surface. Marine seismic survey is mainly used for oil and gas exploration, but on land they help in locating mines or even to find ground water.

The global Marine Seismic Equipment Acquisition market size was estimated at USD 3807.62 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the forecast period.
