Report Overview:

Marine Steering Gear system refers to equipment designed to help in effectively maneuvering the boat traveling on the surface of water bodies. The system acts as an actuating mechanism and link between the rudder and the steering wheel controlled by the helmsmen located on the deck of the boat. The Marine Steering Gear system is comprised of the helm, steering cable, wheel, and cable connections, which all connect wheel to the engine. The helm is the most critical part, which converts the wheel's rotary motion push-pull motion on the cable. This ultimately moves propeller right, left or amidships. Majorly helms are rotary types that are used with gears to turn the rudder. Moreover, there are different types of steering such as hydraulic steering, manual steering, electro-hydraulic steering, and electric steering.

The Global Marine Steering Gear System Market Size was estimated at USD 451.04 million in 2023 and is projected to reach USD 557.67 million by 2029, exhibiting a CAGR of 3.60% during the forecast period.
