Marine Weather Forecast Service is a forecast service for atmospheric and marine environmental conditions in marine areas provided by professional meteorological institutions, government departments, or authorized enterprises based on marine meteorological observation data, numerical model analysis, and meteorological principles. This service is designed to provide forecasts of atmospheric and marine environmental conditions in marine areas for stakeholders involved in maritime activities (such as shipping, fisheries, marine engineering, and maritime rescue). Its core goal is to provide early warning of severe weather and dangerous sea conditions, ensuring the safety of personnel and vessels at sea, and ensuring the orderly conduct of marine production activities. In addition to traditional marine-dependent industries like shipping and fishing, the development of emerging marine industries such as offshore wind power and marine ranching is also increasing demand for marine weather forecast services. Taking offshore wind power as an example, the construction and operation of wind farms are highly dependent on weather conditions. Demand for marine weather forecasts in the offshore wind power sector is expected to grow at an average annual rate of 10% over the next five years. The market is increasingly focused on providing customized services for different users. Services can be tailored to the specific needs of different application areas, such as shipping, offshore oil and gas exploration, fishing, tourism and leisure, and scientific research, by adjusting forecast focus, time accuracy, and service feedback mechanisms to meet the requirements of each industry. Extreme weather events often transcend national borders, prompting countries to strengthen international cooperation in areas such as marine meteorological information sharing and disaster prevention. For example, China will strengthen cooperation and exchanges with neighboring countries, which will help related companies expand their overseas business and encourage multinational companies with solutions compatible with international standards to gain a larger market share.

The global Marine Weather Forecast Service market size was estimated at USD 496.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
