In 2024, global Maritime Collision Avoidance System (MCAS) production reached approximately 122.8 k set with an average global market price of around US\$8,400 per set. The Maritime Collision Avoidance System (MCAS) is an efficient safety system that integrates modern navigation, radar detection, communication, and computer technologies. By monitoring the dynamics of surrounding vessels in real-time, analyzing their headings, speeds, and relative positions, it provides timely warnings of potential collision risks, assisting captains or pilots in making decisions to avoid collisions. This system significantly enhances the safety of navigation under complex sea conditions, reduces navigation risks, and ensures the safety of both the vessel and its crew. With its precise warning and automatic alarm features, it shortens reaction times, minimizes human errors, effectively prevents collision incidents, and simultaneously improves the efficiency and economic benefits of vessel navigation.

The global Maritime Collision Avoidance System (MCAS) market size was estimated at USD 1032.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
