## Abstracts

To address the core challenges faced by maritime workers due to their remote location and unique environment?including difficulties in emergency medical care, lack of specialized medical expertise, and inefficient evacuation of the injured?maritime medical services have emerged. With the booming development of global shipping, marine resource development, and deep-sea activities, since the mid-to-late 20th century, this service system has gradually become more professional and systematic, leveraging advancements in satellite communication and air rescue technologies, and promoting cross-sectoral integration of telemedicine and emergency rescue. Currently, maritime medical services have evolved into a comprehensive support system integrating telemedicine consultation, onboard medical facilities, joint helicopter/ship emergency evacuation, shore-based specialist support, and seafarer medical training. It is widely used on merchant ships, fishing vessels, cruise ships, offshore oil and gas platforms, scientific research facilities, and fisheries operations, providing timely and effective medical intervention for vessels and offshore facilities, significantly reducing maritime medical risks, and ensuring personnel safety and operational continuity. In terms of dynamic trends, sub-markets such as offshore oil platforms and cruise ships are experiencing significant growth. Global cruise passenger numbers exceeded 30 million in 2024, driving demand for onboard medical services. Telemedicine penetration is projected to reach a certain percentage by 2025, with modular medical equipment (such as portable CT scanners) enhancing emergency response capabilities. Overall, maritime medical services are evolving from simple emergency rescue to a full-chain health management platform. Technological integration and policy regulations continue to reshape the market landscape, with the Asia-Pacific region (especially China) and high-end markets in Europe and the United States becoming the main growth drivers.

The global Maritime Medical Service market size was estimated at USD 724.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
