Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Maritime Small Modular Nuclear Reactor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, approximately six Maritime Small Modular Nuclear Reactors were contracted and trial-produced and delivered, with a total cost of approximately US\$120-180 million per system and an industry target gross margin of approximately 20%-28%. These devices typically employ a thermal power rating of 10-60 MWth, with an equivalent output of 3-20 MWe for propulsion and ship power. The reactor pressure vessel height is mostly 3-8 meters. The reactor is modularly designed for easy installation and can be fueled for 8-15 years without replacement. It features a passive safety shutdown system, natural circulation cooling, and a fully enclosed radiation shielding design. It is suitable for icebreakers, polar supply ships, oceanographic research vessels, and offshore energy support platforms. It can significantly reduce reliance on supply ports while ensuring self-sufficiency and low carbon emissions. The upstream mainly involves nuclear fuel supply (such as low-concentration HALEU), control systems, and radiation protection materials. The midstream involves modular reactor assembly and manufacturing. The downstream involves ship power integration and classification society nuclear safety review. Blykalla (Sweden) currently has a theoretical annual production capacity of about 4 modules per year on its pilot line.

The global Maritime Small Modular Nuclear Reactor market size was estimated at USD 762.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.20% during the forecast period.
