Report Overview

The Mask Synthetic Blood Penetration Tester is suitable for the resistance of masks to the penetration of synthetic blood under different levels of test pressure. The mask material was tested with synthetic blood under continuous applied pressure, and the penetration of synthetic blood on the material was visually checked. The tester addresses the performance of materials or certain material constructions used in medical face masks. The procedure is a laboratory test method for measuring the resistance of medical face masks to penetration by a splash of synthetic blood. The synthetic blood mixture is prepared with a red dye to aid in visual detection and a thickening agent to simulate the flow characteristics of blood. The synthetic blood will not always duplicate the polarity, and thus the wetting behavior and subsequent penetration, of real blood and other body fluids through protective clothing materials.
