Abstracts

Material Transfer Isolator (MTI) refers to a sealed, controlled-environment enclosure designed for the safe and sterile transfer of materials between two environments?typically between a cleanroom and external space, or between two separate clean zones?while maintaining isolation to prevent contamination, exposure to hazardous substances, or cross-contamination. These systems often incorporate features such as interlocking doors, glove ports, air filtration (e.g., HEPA/ULPA), and sterilization mechanisms (e.g., vaporized hydrogen peroxide, UV light) to ensure product integrity and operator safety, and are widely used in pharmaceuticals, biotechnology, and life sciences where aseptic processing or containment of potent compounds is critical.

The global Material Transfer Isolator market size was estimated at USD 225.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
