Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Materials for CO₂ Capture competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Materials for CO₂ Capture are substances designed to selectively capture and separate carbon dioxide (CO₂) from gas mixtures such as flue gas, natural gas, or ambient air. These materials are crucial for carbon capture, utilization, and storage (CCUS) technologies aimed at reducing greenhouse gas emissions. In 2024, global Materials for CO₂ Capture production reached approximately 10.9 k tons, with an average global market price of around US\$ 29.5 k USD per ton. The production capacity for Materials for CO₂ Capture in 2024 was approximately 12 k tons. The typical gross profit margin for Materials for CO₂ Capture is between 25% and 35%. The CO₂ capture materials industry chain encompasses upstream raw material suppliers, midstream material producers, and downstream carbon capture technology integrators and end-users. Upstream includes suppliers of chemical precursors such as amines, metal oxides, polymers, and sorbent supports. Midstream companies manufacture specialized materials for CO₂ capture, including chemical absorbents, solid sorbents, membranes, and metal-organic frameworks (MOFs). Downstream, these materials are supplied to power plants, industrial facilities, and carbon capture, utilization, and storage (CCUS) projects, where they are used in post-combustion, pre-combustion, and direct air capture systems. The industry is driven by advancements in material performance, cost reduction, and growing global demand for carbon mitigation technologies.

The global Materials for CO₂ Capture market size was estimated at USD 323.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
