Abstracts

Matrine and oxymatrine are naturally occurring alkaloids primarily derived from the roots of the *Sophora flavescens* plant, which belong to the quinolizidine class of compounds and are characterized by their tetracyclic matridine skeleton structure; these substances have garnered significant commercial and research interest due to their broad-spectrum biological activities, including anti-inflammatory, antiviral, anti-tumor, and insecticidal properties, making them valuable active ingredients in pharmaceutical formulations, agricultural biocides, and cosmetic products, where they are often standardized and purified for efficacy and safety in end-use applications. The global market for these compounds is experiencing steady growth, driven by increasing demand in the pharmaceutical sector, particularly in traditional Chinese medicine and modern drug development for their potential in treating viral infections and chronic diseases, as well as expanding applications in organic farming as natural pesticides and in skincare for their anti-irritant and antioxidant effects, with key production concentrated in China due to the native availability of *Sophora flavescens* and established extraction technologies, though regulatory approvals, supply chain consistency, and competition from synthetic alternatives present ongoing challenges to market expansion.

The global Matrine And Oxymatrine market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
