Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Matte Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global matte resin production is 9170 tons, with an average price of US\$32.6/kg. Matte resin refers to a resin with a dull, non-reflective surface finish, which can be achieved either by using a matte additive in the resin mixture or by applying matting agents and polishing after curing. This finish is preferred for applications like modelmaking and 3D printing because it hides layer lines, shows fine details, and provides a smooth, elegant surface without the high shine of a glossy finish.

The global Matte Resin market size was estimated at USD 299.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Matte Resin market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
