Abstracts

MBR flat membrane module is a sewage treatment equipment that combines membrane separation technology with bioreactor. MBR system is widely used in wastewater treatment, sewage regeneration and water quality improvement, especially in industries with high water quality requirements. MBR system uses the physical separation effect of membrane to remove solid particles, suspended matter, bacteria and other harmful substances in wastewater. As the core component of MBR system, flat membrane module filters out pollutants in water through the pores on the membrane surface, while clean water flows out through the membrane surface. Compared with the traditional activated sludge method, MBR system has higher water treatment efficiency and occupies less area.

The global MBR Flat Membrane Module market size was estimated at USD 1226.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
