Abstracts

MBR Membrane refers to a type of membrane used in Membrane Bioreactor (MBR) systems, which are advanced wastewater treatment technologies. MBR membranes act as a physical barrier, selectively allowing clean water to pass through while retaining suspended solids, bacteria, and other contaminants. These membranes are typically made of materials like polymeric fibers or flat sheets with microscopic pores that act as filters. The MBR membrane process combines traditional biological treatment with membrane filtration, resulting in a highly efficient and compact wastewater treatment system. MBR membranes offer superior solids and pathogen removal, high-quality effluent, and a smaller footprint compared to conventional wastewater treatment methods.
