Abstracts

Measured building survey services are professional technical services that provide accurate and reliable measurement data for the planning, design, construction, and post-maintenance of building projects. These services typically encompass three-dimensional building measurements, topographic surveying, structural deformation monitoring, and the collection and processing of Building Information Modeling (BIM) data, among other aspects. Measured Building Survey Services play a crucial role throughout the entire lifecycle of building projects. During the planning phase, accurate measurement data aids designers in rational layout and design optimization. During construction, real-time measurement monitoring ensures construction accuracy and quality. In post-maintenance, regular measurement surveys help promptly identify and address structural safety issues. Furthermore, with the widespread adoption of BIM technology, these services also provide powerful data support for projects' information management.
