Report Overview

Mechanical agents (also called passive substances) are generally thought to be the most effective for small amounts of bleeding and they create a barrier to stop blood flow and a surface that permits blood to clot more rapidly. These mechanical hemostatic agents have been utilized in vascular surgery more than 50 years. At the beginning of twentieth century, hemostasis was maintained through clamps, clips, sutures, cauterization or direct compression. New mechanical agents have been recently developed such as gelatin, collagen and ORC materials for vascular surgery.
