Report Overview

The mechanical buzzer mainly consists of a multi harmonic oscillator, a buzzer, an impedance matching device, a resonance box, and an outer shell. Some piezoelectric buzzers also have light emitting diodes on the outer shell. The multi harmonic oscillator is composed of transistors or integrated circuits. When the power is turned on (1.5-15V DC working voltage), the multi harmonic oscillator starts to vibrate and outputs an audio signal of 1.5-2.5kHz. The impedance matching device drives the buzzer to produce sound, The buzzer plate is made of lead zirconate titanate or lead niobate magnesium piezoelectric ceramic material, and silver electrodes are plated on both sides of the ceramic plate. After polarization and aging treatment, it is then adhered to brass or stainless steel plates. Mechanical buzzer is an integrated electronic sounder powered by DC voltage, widely used as a sound device in electronic products such as computers, printers, copiers, alarms, electronic toys, automotive electronic equipment, telephones, timers, etc.
