Report Overview

Mechanical steering gear system can be explained as a steering system which uses mechanical force as a driver. It can also be referred as a non-power steering gear system or manual steering gear system. This system can be of two types - rack and pinion gear system in which the rotational motion of the pinion is converted into the linear motion of the rack which is used to move the steering system, and recirculating ball steering system in which a box containing various ball bearings is attached to the drive, when the steering wheel is moved the drive turns the ball bearings forcing them to reach the nut and this force is used to drive the system.
