Report Overview

A vacuum pump is a device that uses various methods to generate, improve and maintain a vacuum in a closed space. A vacuum pump can be defined as a device or device that uses mechanical, physical, chemical or physical-chemical methods to pump the container to obtain a vacuum. With the development of vacuum applications, many types of vacuum pumps have been developed, and their pumping speeds range from a few tenths of a liter per second to hundreds of thousands and millions of liters per second. The ultimate pressure (ultimate vacuum) ranges from rough vacuum to ultra-high vacuum above 10-12 Pa. Due to the wide range of working pressures involved in the vacuum application sector, it is impossible for any type of vacuum pump to be completely suitable for all working pressure ranges vacuum pump. Any pump that uses mechanical movement (rotation or sliding) to obtain vacuum is called a mechanical vacuum pump. Mechanical vacuum pump is a kind of machine for making vacuum, which can discharge or absorb air in a closed or semi-closed space to achieve a relative vacuum in the local space.

The global Mechanical Vacuum Pumps market size was estimated at USD 6360.30 million in 2023 and is projected to reach USD 10654.70 million by 2032, exhibiting a CAGR of 5.90% during the forecast period.
