Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mechanically Detachable Coil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Mechanically detachable coils are implantable medical devices used in interventional embolization therapy. Delivered via catheter to aneurysms or abnormal blood vessels, they rely on their metal spiral structure (usually platinum-tungsten alloy) to induce thrombus formation and achieve occlusion. The "mechanical detachment" mechanism refers to the precise and immediate release achieved during the procedure through pushing, pulling, or rotating motions via the physical connection structure between the guidewire and the coil (such as snaps, threads, or pull wires), requiring no current or heat energy. This makes them suitable for clinical scenarios sensitive to electrolysis or requiring rapid operation. The upstream of the industry chain includes suppliers of high-purity platinum-tungsten alloy wire, precision micromachining equipment, and guidewire and delivery system components. The midstream consists of neurointerventional or peripheral vascular device companies with Class III medical device registration certificates, such as Cook Medical in the US, and some domestic innovative companies (such as Guichuang Tongqiao and Xinwei Medical, although mainly focusing on other types, a few have ventured into mechanical detachment technology), which need to master core technologies such as micron-level coiling, surface treatment, and detachment reliability verification. The downstream mainly targets neurosurgery and interventional radiology departments of tertiary hospitals, entering clinical practice through distributors or direct sales. In 2024, the global production of mechanical release spring coils was approximately 45,000 units, with a global average market price of approximately US\$1,600 per unit. The gross profit margin of major companies in the industry ranged from 40% to 60%. The production

capacity of a single production line was approximately 5,000 units per year.

The global Mechanically Detachable Coil market size was estimated at USD 72.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
