Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mechanically Lined Pipe competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Mechanically Lined Pipe production reached approximately 1540 k tons, with an average global market price of around US\$1340 per ton. Mechanically Lined Pipe (MLP) is a bi-metallic composite pipe consisting of a carbon steel outer carrier pipe for structural strength and a thin corrosion-resistant alloy (CRA) liner such as stainless steel or Inconel installed inside. The liner is mechanically bonded to the host pipe—commonly by hydraulic expansion, thermal shrink-fit, or hydroforming—to achieve tight interference contact. The pipe ends are sealed via weld overlays or fittings to ensure integrity. MLPs offer effective corrosion protection at a lower cost than fully CRA pipes, making them ideal for corrosive and high-pressure applications in sectors like oil & gas, subsea flowlines, chemical processing, and hydrogen or CO₂ transport. The upstream raw materials of mechanically lined pipes are usually carbon steel outer pipes and corrosion-resistant alloy (CRA) lining materials, such as 316 stainless steel, 904 stainless steel, duplex stainless steel, 625 alloy, 825 alloy, etc.; the downstream covers industries such as oil and gas, chemicals, and water treatment.

The global Mechanically Lined Pipe market size was estimated at USD 2064.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
