Abstracts

Medical advanced ceramics are a class of high-performance, non-metallic inorganic materials engineered for specialized applications within the healthcare sector, characterized by properties such as biocompatibility, high strength, wear resistance, and chemical inertness. These ceramics include oxides (e.g., alumina, zirconia), non-oxides (e.g., silicon nitride, hydroxyapatite), and composites, and are utilized in critical medical devices including orthopedic implants (e.g., hip and knee replacements), dental prosthetics (e.g., crowns, bridges, and implants), surgical instruments, bone graft substitutes, and diagnostic equipment components. Their ability to integrate with biological tissues, resist corrosion, and endure mechanical stress makes them indispensable in improving patient outcomes, reducing revision surgeries, and enabling minimally invasive procedures.

The global Medical Advanced Ceramics market size was estimated at USD 2150.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
