## Abstracts

The medical aesthetic picosecond laser is an ultrafast laser device designed for medical aesthetics. Its pulse width is in the picosecond level (10<sup>-12</sup> seconds). Through high-energy output in a very short time, the light energy is directly applied to the pigment particles or specific tissues in the skin. Compared with traditional nanosecond lasers, the medical aesthetic picosecond laser can perform treatments such as pigment removal, tattoo removal, skin quality improvement and anti-aging with higher precision and efficiency, while causing less thermal damage to surrounding tissues, faster recovery and better patient experience. This technology has been widely used in dermatology, beauty hospitals and medical beauty centers, and is a core tool for high-end non-invasive beauty treatments.

The global Medical Aesthetics Picosecond Laser market size was estimated at USD 608.66 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
