Report Overview

The Medical Alert System, also known as a Personal Emergency Response System (PERS), is a wearable or home-based device designed to provide immediate assistance to individuals—particularly seniors or those with chronic medical conditions—in the event of an emergency, such as a fall, sudden illness, or other medical crisis. These systems typically include a wearable button or pendant that, when pressed, connects the user to a 24/7 monitoring center, where trained operators can assess the situation and dispatch emergency services if needed. Advanced models incorporate fall detection technology, GPS tracking for mobile use, and integration with smart home devices or telehealth platforms. The primary function of PERS is to enhance safety and independence for vulnerable populations by reducing response times during critical situations, thereby preventing prolonged unattended emergencies that could lead to severe health complications or fatalities. The market for these systems is driven by an aging global population, increasing awareness of elderly care solutions, and advancements in wireless and IoT technologies that improve reliability and functionality.

The global Medical Alert SystemPersonal Emergency Response System market size was estimated at USD 2150.54 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.78% during the forecast period.
