## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medical Baby Care Equipment competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Medical Baby Care Equipment originated from baby incubator, mainly to create a training environment for newborns. The main equipment of infant care equipment are infant incubator and infant radiant warming table. The infant incubator is a closed structure, and the infant radiant warming table is an open structure. The infant incubator focuses on infant care function, and the infant radiant warming table focuses on first aid function. Both of them are mainly used for the first aid and nursing of premature infants, low birth weight infants, sick children and other newborns Obstetrics and Gynecology basic medical equipment. Infant incubators account for a significant share of the medical baby care equipment market. The growth of the infant incubator market is driven by the increasing prevalence of premature and low birth weight infants globally, particularly in developing countries. Technological advancements in neonatal care, such as integrated monitoring systems, temperature and humidity control systems, and portable transport incubators, have significantly improved neonatal survival rates. Furthermore, increased investment in healthcare infrastructure, growing awareness of neonatal care, and government initiatives to reduce infant mortality have all fueled demand for advanced incubator systems in hospitals and neonatal intensive care units (NICUs). Despite positive market growth, several challenges remain. The high cost of advanced incubators limits their adoption in resource-poor areas. Inadequate neonatal care facilities, a lack of trained personnel, and poor maintenance capabilities in some regions hinder effective implementation. Additionally, regulatory complexities, product recalls due to safety concerns, and difficulties in integrating incubators with electronic health records or telemedicine systems may also constrain market expansion,

especially in rural and underserved areas.

The global Medical Baby Care Equipment market size was estimated at USD 987.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
