Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medical Beauty Regeneration Anti-Aging Injection competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Medical beauty regeneration anti-aging injections are a type of skin filling product used for facial rejuvenation and tissue repair. They mainly achieve anti-aging effects by stimulating the regeneration of the body's own collagen. The core ingredients of this type of injection usually include collagen, microsphere regeneration materials (such as PLLA poly-L-lactic acid, PCL polycaprolactone, etc.) and PDRN (polydeoxynucleotide) and other active ingredients with regenerative properties. By injecting into the dermis or deeper tissues of the skin, these ingredients can continuously stimulate fibroblast activity, promote the regeneration and reorganization of collagen fibers, elastic fibers and extracellular matrix, thereby improving aging phenomena such as skin sagging, wrinkles, and depressions. Compared with traditional hyaluronic acid-based simple filling products, medical beauty regeneration anti-aging injections not only have a certain instant filling effect, but more importantly, they have more significant advantages in stimulating the speed of collagen regeneration, the duration of efficacy (usually up to 1-2 years or even longer), tissue compatibility and natural degradability. This type of product is widely used in many medical beauty anti-aging projects such as facial contour enhancement, nasolabial fold improvement, temple filling, jawline shaping, etc., and is one of the important technical means in the current field of non-surgical facial rejuvenation.

The global Medical Beauty Regeneration Anti-Aging Injection market size was estimated at USD 6702.0 million in 2025 and is projected to grow at a compound annual

growth rate (CAGR) of 17.80% during the forecast period.
