Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Medical Cold Pack competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Medical Cold Pack production reached approximately 29.15 million Pcs, with an average global market price of around US\$ 3.3 per Pc. The global single-line production capacity ranges from 800k Pcs per year. A medical cold pack is a cryogenic physical therapy device used in healthcare. It is typically made of a non-toxic polymer gel or phase-change material encapsulated in a soft, waterproof casing. Its core function is to achieve localized cold therapy by maintaining a stable, low temperature (typically 0°C to 10°C) for a long period of time. Before use, it requires freezing to activate, solidifying the contents into a semi-solid state, allowing it to store and slowly release cold. Clinically, it is primarily used for cold compresses in acute injuries such as sprains, fractures, and postoperative swelling. By constricting blood vessels, it reduces inflammation and pain, inhibits bleeding and interstitial fluid exudation, and can also reduce fever, relieve muscle spasms, and provide local analgesia after anesthesia. Compared to traditional ice cubes, medical cold packs offer advantages such as temperature control, protection against frostbite, high plasticity, and reusability. They are a common medical consumable in hospitals, clinics, and home care settings. The global medical cold pack industry chain's upstream core is supplied by chemical giants such as BASF and DuPont, which supply refrigerants like ammonium nitrate. Nippon Shokubai provides polymer gels. Non-woven fabrics are dominated by companies like Freudenberg, with raw material costs influenced by oil prices and environmental policies. Downstream applications are primarily in medical institutions (hospitals and clinics for postoperative care and vaccine cold chain), requiring FDA/CE certification. A diversified market is also emerging, with applications in sports centers (for sports injury

emergency care), homes (for portable cold compresses), and supermarkets. Demand is driven by rising medical spending and public health awareness, while environmental trends are driving technological innovation in reusable cold packs.

The global Medical Cold Pack market size was estimated at USD 96.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
