## Abstracts

Medical equipment permanent magnets are magnetic elements made of metals such as iron, cobalt, nickel, or their alloys and oxides. After being magnetized through specific processes, they can maintain a constant and strong magnetic field for an extended period, playing a core role in medical devices. These magnets possess high remanence, coercivity, and demagnetization resistance, allowing them to maintain magnetic field stability without external energy input during the device's operational cycle. The strong magnetic field they generate can replace traditional electromagnetic coils to reduce power consumption, improve operational efficiency, enhance motor efficiency and power density, and reduce device size and weight. They are commonly used as magnets in magnetic resonance imaging (MRI) devices to provide precise images for medical diagnosis. Additionally, they are utilized in magnetic therapy devices such as magnetic necklaces and pillows, stimulating acupoints or lesions in the human body through magnetic fields to improve blood circulation, alleviate inflammation, and achieve therapeutic and health-preserving effects.

The global Medical Device Permanent Magnet market size was estimated at USD 1321.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
